Dr. David Mor-Yosef, MD

Non-Surgical Rhinoplasty: Procedure and Advantages

Dr. David Mor-Yosef, MD, has been practicing aesthetic medicine for the last 8 years, and has a vast experience in non-surgical rhinoplasty.

In the last 6 years, I have gained a vast experience in non-surgical rhinoplasty or "nose sculpturing". There are several indications in the nasal area that can be treated. We can treat depressions in the bridge of the nose, fill the tip of the nose, lift or adjust its angle, correct nose projections and others.

The treatment will always include a thorough examination of the patient, in order to assess the suitability for the treatment, patient preparation, and area disinfection. The injection is to the supra-periost plane, in a vertical angle. One can use a needle or a cannula, depending on the nose features and the needed correction. After the

injection a manual sculpturing is required to achieve optimal results.

After treatment, the mild bleeding from the treatment should be stopped with a gentle pressure. Ice should be applied, to prevent or reduce the generation of swelling and hematoma formation.

Luminera's Crystalys filler is very well suited for treatment of volume loss and facial contouring. Facial features that need emphasizing, such as cheek bones, chin or jaw line, can be easily and effectively treated with Crystalys.
In addition, as we age, the bones lose their mass, and the 3D structure of the face is flattened. For the treatment of such flattening, Crystalys is the most suited product. Crystalys treatment will generate or restore a full face look, give long lasting results, and a natural appearance.

The advantages of this treatment, when considering the alternative of surgery, are the ease of treatment, immediate results, natural looking outcome, minor side effects, almost no recovery time and that the treatment is much more affordable. The fact that Crystalys is biodegradable, for me, is a plus. When the time comes to redo the treatment, it can be adjusted to the specific needs of the patient, which changes with time. ■

Masterclass-Workshop

Am 10. Oktober 2015 findet ein "Masterclass-Workshop" mit Dr. David Mor-Yosef statt.
